Server Administrator • Cloud & Devops

PROFESSIONAL SUMMARY

Server Administrator with 1+ year of hands-on experience managing Linux production hosting infrastructure supporting 1,200+ VPS instances and shared hosting environments. Experienced in Linux administration, cPanel/WHM, KVM virtualization, DNS, SSL/TLS, and root cause analysis. Passionate about building reliable infrastructure and growing in Cloud and DevOps.

EXPERIENCE

Veeble Softtech Pvt. Ltd.

Aug 2025 – Present

Junior Server Administrator

Kochi, Kerala

- Managed and supported a production hosting infrastructure consisting of **6 virtualization nodes (4 KVM and 2 OpenVZ) hosting 1,200+ VPS instances**, performing node-level troubleshooting, resource monitoring, and virtualization issue analysis
- Administered **2 CloudLinux cPanel/WHM shared hosting servers, 1 Windows Plesk shared hosting server, and 2 backup servers**, ensuring high availability of web, email, database, DNS, and backup services
- Performed structured root cause analysis for Linux hosting incidents by analyzing system logs, service status, resource utilization, and networking components, while supporting customer migrations, SSL/TLS, DNS, and production hosting operations

Hashroot Pvt. Ltd.

Apr 2025 – Jun 2025

Linux Server Admin Intern

Kochi, Kerala

- Administered AlmaLinux and Ubuntu servers, deploying Apache, NGINX, SSL, virtual hosts, and firewall configurations across **15+ lab environments**
- **Migrated 10+ WordPress sites** with DNS configuration, MySQL/MariaDB management, backup restoration, and CMS hardening
- Managed **25+ domains** using WHM, cPanel, and Plesk, configuring AutoSSL, PHP, cron jobs, and resolving web, mail, and database issues

SELF PROJECTS

Production-Grade AWS Infrastructure Deployment

- *Tools used: EC2, VPC, Auto Scaling, ALB, Bastion Host, Ubuntu Server, Python*
- Deployed a highly available Python web application on AWS using a secure VPC architecture with public/private subnets, Auto Scaling Groups, Application Load Balancer, NAT Gateway, and Bastion Host.

Compiled LAMP Stack & WordPress Hosting

- *Tools used: Apache2 4.64, PHP 8.3.7, MySQL 8.4.0, Ubuntu 22.04, WordPress*
- Compiled and configured a complete LAMP stack from source (without package managers) on Ubuntu, and deployed WordPress with domain simulation and port 80 hosting

Centralized Log Monitoring with Splunk

- *Tools used: Splunk Enterprise, Universal Forwarder, FortiGate VM, Apache2, VMware*
- Deployed Splunk in a lab environment to collect and analyze logs from Apache and FortiGate, configured universal forwarders, custom indexes, field extractions, and built dashboards for system event visibility and alerting

EDUCATION

MG University <i>Bachelor of Science in Cyber Forensics</i>	Sept. 2021 – Oct. 2024 Kochi, Kerala
DHSE <i>Higher Secondary in Computer Science</i>	Jun. 2019 – Mar. 2021 Kochi, Kerala

CERTIFICATIONS

- **AWS Certified Cloud Practitioner** (*Foundational 101*)
- **Docker Foundations Professional Certificate**
- **Certified SOC Analyst v1**
- **Qualys Vulnerability Management**
- **CompTIA ITF+**

SKILLS

Operating Systems: Ubuntu, AlmaLinux, CentOS, CloudLinux, Windows Server

Linux & Hosting: cPanel/WHM, Plesk, SolusVM, Apache, NGINX

Virtualization: KVM, OpenVZ

Cloud & Containers: AWS (EC2, VPC, Auto Scaling, ALB, IAM, S3), Docker

Databases: MySQL, MariaDB

Monitoring & Logging: Grafana, NodePrism, Splunk, Log Analysis

Networking: DNS, SSL/TLS, TCP/IP, Firewall Configuration, Backup & Recovery

Scripting & Tools: Bash, Git, SSH, systemctl, journalctl
